ABSTRACT

Jiangsu ANCAN Technology Co., Ltd. is an enterprise that integrates the research, development, and manufacturing of electrochemical equipment, engineering design, and the delivery of turnkey projects for the Chlor-Alkali industry. It has achieved remarkable accomplishments within the industry and holds membership of multiple global associations related to chlorine.

ANCAN's core business, Chlor-Alkali engineering projects, covers the manufacture of ion membrane electrolyzers, the supply of facilities related to electrolysis system and process packages, while also providing on-site maintenance, operation guidance and other attentive services.

With its profound technical accumulation, rich project experience and strong R&D capabilities, ANCAN continuously optimizes product performance and service quality, consolidates its leading position in the electrochemical industry, and becomes the core force to promote technological innovation and sustainable development in the industry. It is committed to becoming a technology-leading, first-class service and customer-trusted engineering company that provides green, efficient and safe electrochemical equipment and services to the world.
